OBJECTIVE

As a dynamic software developer, I thrive on learning and adapting to cutting-edge technologies. I am passionate about leveraging my skills to drive innovation within your organization. With a strong commitment to continuous improvement and embracing challenges, I work towards innovative solutions while continuously enhancing my professional abilities.

PROJECTS

● **Billing Management System**

I have developed a straightforward billing management system for a canteen that allows for instant product additions, automatically calculates costs, and generates total bills efficiently.

Stack used : React js

● **User Database Management System**

Built a users database management system with Nodejs, MongoDB and Postman API.

Stack used : Node.js, Express.js, MongoDB, RestAPI, Postman.

● **Abroad Consultancy website using mern stack**

Developed a robust consultancy website for international education using the MERN stack. Seamlessly integrated features such as instant chat, immigration tools, visa guidance, alumni testimonials, and extensive resources.

Stack used : Mern stack.

● **Vehicle Rental System**

Designed a console based vehicle rental system with admin and borrower side functionality.

Stack used : OOPs concept, Java, MySQL.

● **Online Banking Management System**

A console project for online banking management with OOP principles and MySQL. Features include ATM withdrawals with OTP, loan management, transactions, and roles for admin, employee, and customer.

Stack used : OOPs concept, Java, MySQL.
